About me

Absolutely love technology and am very passionate about computers in general. Been playing video games on the computer from a very young age. I have always been fascinated by computers and the technology behind it. Couldn't pursue a CS degree but the passion was always there. Covid lockdown of 2020 allowed me to pursue my dream once again. Used the lockdown period to learn development on my own with the help of Google and YouTube. I'm loving each and every second of it now.

Skills

Languages : JavaScript | TypeScript | HTML | CSS | C & C++ (Basics)
Frameworks & Libraries: Next | React | Nest | Express | Angular | SCSS | TailwindCSS | Jest (Basics)
Databases : MongoDB | PostgreSQL | MySQL
Other Tech Skills - Git | GitHub | Debugging | Problem Solving | Slack | ClickUp | Teams etc.
Soft Skills : Communication | Teamwork | Time Management | Patience | Creativity etc.

Work Experience

Software Developer (Full-Stack)   January 2024 - Present
Tutors Finland Oy | Espoo, Finland (Remote)
- Facing a new challenge here, my expertise was in React/Next but the codebase I'm working on currently is in Angular. I Took this challenge because I'm confident enough in JavaScript.
- The codebase was in Angular 10, we had to migrate it to Angular 16. I'm currently learning the nuances of Angular from scratch by fixing various issues in the codebase & building small personal projects parallelly because I think that's the best way to learn any new technology..
- Within 2 weeks in this role, I have managed to understand Angular to a level where I can fix the previous issues and implement some new features by myself without much supervision.
- Fixed some of the previous Stripe issues and documented them properly with a daily update log, bug tracking, bug fixes docs etc.

Software Developer (Frontend)   March 2023 - December 2023
Repliq | Dhaka, Bangladesh (Hybrid)
- Ensured robust and efficient data management by designing and integrating APIs for CRUD.
- Demonstrated expertise and learned handling Next.js 12/13, Axios, TanStack Query, Formik, yup, react-hot-toast, react slick, swiper.js, mobX and many other libraries without much supervision.
- Played a pivotal role in enhancing UI/UX significantly through numerous feature implementations.
- Collaborated effectively with the client, design and backend team, maintaining clear communication to convey project requirements within deadline.
- Accumulated 10 months of professional experience by contributing to three major projects.
- Actively participated in regular stand-up meetings (morning & evening) and other internal meetings, providing project updates and fostering a collaborative working environment.

Projects

Supplers -
A platform to let wholesalers & retailers connect in this global community for the furniture and interior design industry. A lot of functionalities are in here including authentication / authorization, connecting & being partners, admin dashboard, read - add - update - delete products/projects/services, file uploading/downloading, search, filter, sort, pagination, notifications, stripe and many more. Built it using Next.js 13 & Django. Live site

Chef Koochooloo -
I played a pivotal role in the development & enhancement of this educational platform. The project was in Angular 10, migrated it to Angular 16. Despite having no experience in Angular. I managed to learn Angular basics within 2 weeks & swiftly tackle 250-300 issues within the next 1 month, transforming a previously paused project into a smoothly running application within 1.5 months and built a lot of features in express as well. Live site —> Username - demoarshad && Password - arshad1234

E-bazaar App (Frontend) -
A dummy e-commerce app. We can add new products through a modal, then add products to cart and update the quantity of products in cart, delete from cart, generate a unique slug, provide a discount from start date to end date, a 25% discount to each product, search, pagination, loading state and side drawer for the cart. Built it using Next,js 13 App router with TypeScript. Live App   Github Repo

Daraz Clone -
An e-commerce dummy platform. Used react hooks, react-slick-slider, font awesome, react router and some other packages in here which made the site look & feel good while using it. We can add to cart, remove from cart, update quantity of products in cart, react-hot-toast to give user feedback of activity and dynamic routing to each page of each product. Built it using React.js. Live Site   Github Repo

E-bazaar App (Backend) -
Backend code for the E-bazaar, I've implemented product add, search, pagination and cart functionalities all in this backend app with Nest.js and stored all the data in MongoDB atlas, so even if we reload all the data will persist. Built it using Nest.js and mongoose. Github Repo

I'm also an open source advocate. I have contributed to a couple of open source projects in Hacktoberfest. I got to learn a lot about forking, communicating, making PR's to Open source projects etc. I also have a Youtube channel where I try to help people to learn programming. Currently I'm learning DSA & Problem Solving to skill myself up & build up my core knowledge of programming.

Education

Southeast University   June 2015 - February 2020
Dhaka, Bangladesh   LL.B.(Hons.)

Successfully completed my academic journey by earning an Honors Degree in Law in the year 2020.
