LinkedIn	https://www.linkedin.com/in/mohammed-arshad-67920b213/
Nationality	Bangladeshi
Date of Birth	23.10.1996
Availability	Immediate, pending relocation timeline (4-6 weeks post-offer)
Address	Dhaka, Bangladesh (Available for relocation)

Professional Summary

Senior Full-Stack Software Engineer with nearly four years building production systems, the last three with European technology teams in Finland and the Netherlands. Backend depth in TypeScript, NestJS, Next.js and PostgreSQL, with hands-on experience in multi-tenant SaaS, payment systems, API architecture, database design, security and cloud infrastructure. Recently delivered a production-grade MVP end-to-end as sole engineer in 12 weeks. Based in Bangladesh, available to relocate to Europe (Germany preferred). German B1, targeting B2 by Q3 2027.

Professional Experience

11/2025 - Present **Senior Software Engineer**, *Roar Media Studio*, Vantaa, Finland (Remote)

- Delivering a production-grade MVP end-to-end (Next.js + NestJS + PostgreSQL) – architecture, backend, frontend, infrastructure and deployment shipped in 12 weeks.
- Own the full backend platform (API architecture, authentication, database modelling) and full frontend surface (implementation, Core Web Vitals – 30% load-time reduction).
- Run the entire infrastructure layer solo: CI/CD pipelines, deployments, monitoring and incident response – maintained 99.3% uptime.

04/2026 - 10/2026 **Senior Software Engineer**, *Carsu Technologies*, Amsterdam, Netherlands (Remote)

- Multi-tenant SaaS engineering on NestJS, Next.js, PostgreSQL and Azure. A production platform serving European customers across 8 languages.
- Engineered Stripe subscription and payment workflows including trials, webhooks, promotional credits, refunds and dispute handling.
- Distributed systems patterns for financial correctness: cryptographically signed revocable tokens, append-only ledgers, first-touch attribution and multi-stage approval workflow.
- Multi-tenant security engineering across the authenticated surface – role guards, tenant scoping, permission-key architecture and systematic route audits eliminating fail-open endpoints.

01/2024 - 11/2025 **Full-Stack Software Engineer**, *Tutors Finland Oy*, Espoo, Finland (Remote)

- Led migration of a production EdTech platform from Angular 10 to 16, resolving 350+ critical issues and improving performance by 20%.
- Re-architected legacy REST APIs, improving response time by 30% through query optimization and caching strategies.
- Collaborated in a distributed team of 6–8 developers, leading sprint planning and ensuring on-time delivery of key features.
- Built an automated data migration pipeline from Google Cloud Storage to AWS S3, reducing storage costs by 35%.

01/2023 - 12/2023 **Software Engineer (Frontend)**, *Repliq Limited*, Dhaka, Bangladesh (Hybrid)

- Built modular frontend components for microservice-based systems, improving Lighthouse performance scores by 15%.
- Delivered features across multiple enterprise applications, contributing to a 10% reduction in bounce rate.
- Coordinated requirements between clients, design and backend teams across three major projects, maintaining consistent on-time delivery.

Technical Skills

Primary Stack	JavaScript, TypeScript, Node.js, NestJS, React, Next.js, PostgreSQL, Prisma
Also Experienced	Angular, Express, MongoDB, TypeORM, Redux, MobX, Zustand, TailwindCSS
Infrastructure	Docker, AWS, GitHub Actions, Nginx, Kubernetes, Azure, Terraform
Testing & Quality	Jest, Playwright, Web Vitals optimization

Project Experience

Carsu Multi-tenant SaaS platform for automotive workshops (NestJS, Next.js, PostgreSQL, Stripe) localised in 8 languages. Own Stripe billing (webhook-driven state machines, idempotent money paths, dispute clawbacks) and closed fail-open authorisation gaps across the multi-tenant permission system.

Chef Koochooloo Global EdTech platform teaching children about nutrition, culture and geography through cooking. Used by schools and families across multiple countries. Joined as technical lead when the platform was stalled mid-development, inherited a Frontend team of 6-8 developers and drove it to production stability. Scope covered frontend, architecture decisions, sprint planning, cross-team coordination with the client and infrastructure strategy (GCP $\rightarrow$ AWS migration).

Supplers Built core platform features including authentication, real-time chat, payments (Stripe), and admin dashboard. Optimized user workflows and improved system maintainability for future scalability.

Education

03/2020 - 12/2022 Full-stack software engineering self-study

freeCodeCamp, structured project-based learning, open source contributions eventually leading to first professional software engineering role.

06/2015 - 02/2020 Bachelor of Laws (LLB.), *Southeast University, Dhaka*, Bangladesh

Strong foundation in legal reasoning, contract analysis and regulatory frameworks, applied in current interest in legal tech and compliance-focused engineering.

Languages

German	B1 niveau Deutsch (targeting B2 by Q3 2027, currently in structured coursework)
English	Fluent / Professional Proficiency
