Mohammed Arshad

Full-Stack Software Engineer

Work Authorization: **Eligible for EU Blue Card** via IT Specialist pathway

Personal Information

Phone	+880 1317 089 432
Email	arshadchowdhury46@gmail.com
GitHub	github.com/ArshadChowdhury
LinkedIn	linkedin.com/in/mohammed-arshad
Nationality	Bangladeshi
Date of Birth	23.10.1996
Address	Dhaka, Bangladesh (Available for relocation)
Notice Period	Immediate (Remote start possible during relocation processing)

Professional Summary

Full-Stack Software Engineer with almost 4 years building production systems for European teams and clients in Sweden, Finland and the Netherlands.
Strong in TypeScript, NestJS, Next.js and PostgreSQL with hands-on experience in multi-tenant SaaS, Stripe payment systems, API design and cloud infrastructure.
Shipped a production MVP end-to-end in 12 weeks.
Available to start remotely immediately and willing to relocate at my own cost.
Professional English (C1) and German B1, working toward B2.

Professional Experience

11/2025 – Present **Full Stack Engineer**, *Roar Media Studio*, Finland (Part-time, Freelance)

- Designed and launched a production MVP solo in 12 weeks (Next.js, NestJS, PostgreSQL), then took ownership of new features and database scaling.
- Built the REST API, authentication and data model, and cut page load time by 30% through Core Web Vitals optimization.
- Run CI/CD, zero-downtime deployments, monitoring and incident response on my own.
- Lead daily standups and mentor junior developers and interns, working directly with the CEO on priorities.

04/2026 – 11/2026 **Full Stack Engineer**, *Carsu Technologies*, Netherlands (Remote, Contract)

- Built and maintained a multi-tenant SaaS platform (NestJS, Next.js, PostgreSQL, Azure) serving European workshops in 8 languages.
- Implemented Stripe billing end-to-end: subscriptions, trials, webhooks, refunds and dispute handling, with idempotent payment flows.
- Designed financial-integrity features: signed revocable tokens, append-only ledgers and multi-stage approval workflows.
- Fixed fail-open authorization gaps by adding role guards, tenant scoping and a permission-key system, and audited every authenticated route.
- Wrote Jest unit tests and Playwright end-to-end tests for billing and permission flows.

01/2024 – 10/2025 **Full-Stack Engineer**, *Tutors Finland Oy*, Finland (Remote)

- Led the Angular 10 to 16 migration of a production EdTech platform (Chef Koochooloo), resolving 350+ critical issues and improving performance by 20%.
- Re-architected legacy REST APIs, cutting response times by 30% with query optimization and caching.
- Collaborated in a distributed team of 6–8 developers, leading sprint planning and ensuring on-time delivery of key features.
- Built a Google Cloud Storage to AWS S3 migration pipeline, reducing storage costs by 35%.

03/2023 – 12/2023 **Junior Software Engineer**, *Repliq Limited*, Bangladesh (On-site)

- Built modular frontend components for microservice-based systems, improving Lighthouse performance scores by 15%.
- Engineered core workflows for **Supplers** (a Swedish B2B marketplace), shipping authentication, real-time messaging, Stripe payment integration and an administrative operations dashboard.
- Delivered features across multiple enterprise applications, contributing to a 10% reduction in bounce rate.
- Coordinated technical requirements directly between European/enterprise clients, product design, and backend teams across three production platforms with consistent on-time delivery.

Technical Skills

Primary Stack	JavaScript, TypeScript, Node.js, NestJS, React, Next.js, PostgreSQL, Prisma
Also Experienced	Angular, Express, MongoDB, TypeORM, Redux, MobX, Zustand, TailwindCSS
Infrastructure	Docker, AWS, GitHub Actions, Nginx, Azure
Testing & Quality	Jest, Playwright, Web Vitals optimization

Languages

German	B1 Niveau Deutsch (targeting B2 - Q3 2027, currently in structured coursework)
English	C1 (Professional Proficiency)
Bengali	Native Proficiency

Education

03/2020 - 12/2022 Full-stack software engineering self-study

freeCodeCamp, structured project-based learning, open source contributions eventually leading to first professional software engineering role.

06/2015 - 02/2020 Bachelor of Laws (LL.B.), *Southeast University, Dhaka*, Bangladesh

Analytical foundation in regulatory frameworks, data privacy and contract logic applied directly to GDPR-aware architecture, payment compliance and audit-ready software.

Project Experience

Carsu
Live app

Multi-tenant SaaS platform for automotive workshops (NestJS, Next.js, PostgreSQL, Stripe) localised in 8 languages. Owned Stripe billing (webhook-driven state machines, idempotent money paths, dispute clawbacks) and closed fail-open authorisation gaps across the multi-tenant permission system.

Chef Koochooloo
Live app

Global EdTech platform teaching children about nutrition, culture and geography through cooking. Used by schools and families across multiple countries. Joined as project lead when the platform was stalled mid-development, inherited a Frontend team of 6-8 developers and drove it to production stability. Scope covered frontend, architecture decisions, sprint planning, cross-team coordination with the client and infrastructure strategy (GCP → AWS migration).

Supplers
Live app

Built core platform features including authentication, real-time chat, payments (Stripe), and admin dashboard. Optimized user workflows and improved system maintainability for future scalability.
